PROFILE

Security automation engineer with 2.6 years of experience at a Fortune 500 company (EchoStar/Dish Network), specialising in API security testing, vulnerability identification, and CI/CD pipeline automation. Currently completing a Master of Cybersecurity at Monash University (expected completion late 2027), building open-source security tooling alongside coursework — including an automated vulnerability scanner with CI/CD integration and a hybrid ML/rule-based log anomaly detector. OWASP Top 10 for LLM Applications certified. Experienced presenting technical solutions to senior stakeholders and delivering under deadline pressure.

TECHNICAL SKILLS

Security: OWASP Top 10, API Security Testing, Vulnerability Assessment, Security Automation, DevSecOps, Anomaly Detection, Cloud Security

Technical: Python, JavaScript, SQL, Robot Framework, Git, GitHub Actions, CI/CD, scikit-learn, MongoDB, AWS

Professional: Stakeholder Presentations, Technical Documentation, Cross-functional Collaboration, Agile

PROFESSIONAL EXPERIENCE

Engineer

Aug 2023 – Jan 2026

EchoStar / Dish Network Technologies (Fortune 500)

- Built and scaled automation frameworks, eliminating 60+ hours of manual testing effort
- Built an automated security defect-reporting tool (Python, Robot Framework, JIRA API) that analysed test failures and auto-generated tickets, cutting manual review effort by 70%
- Applied OWASP security practices validating APIs for Apple and Amazon B2B integrations, identifying 20+ critical defects including security vulnerabilities
- Designed CI/CD pipelines with security controls and automated 300+ test cases, improving deployment reliability and security coverage
- Led migration from ReadyAPI to Robot Framework, improving maintainability and execution efficiency
- Spot Award recipient for automating critical OFSLL workflows for Fortune 500 clients (Apple, Amazon); received executive recognition from US-based senior management

SECURITY PROJECTS

SecAudit — Automated Security Vulnerability Scanner | Python, GitHub Actions, GitHub API

- Built an automated scanner detecting OWASP-mapped vulnerabilities (missing security headers, HTTPS enforcement, insecure cookies) in live web applications
- Integrated GitHub Actions CI/CD pipeline that triggers scans on every push and on a weekly schedule
- Built GitHub API integration to auto-create severity-rated Issues for each finding — same automation pattern used professionally for JIRA defect reporting

AI Log Anomaly Detector | Python, scikit-learn, Pandas

- Built a hybrid rule-based + machine learning system using Isolation Forest to detect brute force attacks, endpoint scanning, and automated odd-hour access in server logs
- Diagnosed and resolved a false-positive problem caused by a fixed ML contamination assumption; redesigned detection architecture across three iterations so security rules determine threat classification while ML scoring ranks severity
- Achieved zero false positives and zero false negatives on a 531-entry test dataset with three distinct injected attack patterns

Automated Security Defect Reporting Tool | Python, Robot Framework, JIRA API

- Built end-to-end automation tool that analysed test results, identified failures, and auto-generated JIRA tickets; identified 13+ critical issues during automated execution

CERTIFICATIONS

- OWASP Top 10 for Large Language Model (LLM) Applications
- Cloud Security and Audit Fundamentals: AWS, Microsoft Azure, Google Cloud | Cryptography and Network Security
- EchoStar AI Aware Graduate | IBM Responsible AI | IBM Generative AI for Developers

EDUCATION

Master of Cybersecurity

Mar 2026 – Dec 2027

Monash University, Melbourne | Network Security, Cryptography, Cloud Security, Secure SDLC

Bachelor of Engineering, Information Science and Engineering

2019 – 2023

JSS Science and Technology University, India | CGPA: 8.93/10 | 1st Place, Sahaj Software Hackathon
