Master of Cybersecurity, Monash University (Expected Dec 2027) | BE Information Science, CGPA 8.93/10
Full Working Rights (Student Visa)

PROFESSIONAL SUMMARY

Cybersecurity and QA Automation professional with 2.6 years of experience at EchoStar/Dish Network (Fortune 500), specialising in API security testing, vulnerability assessment, CI/CD pipeline automation, and DevSecOps practices. Currently completing a Master of Cybersecurity at Monash University (expected Dec 2027). Proven ability to deliver security-focused automation solutions, communicate technical findings to senior stakeholders, and drive measurable risk reduction. OWASP Top 10 for LLM Applications certified. Seeking to apply technical security expertise and analytical skills within Deloitte's Cyber Risk Advisory practice, with a focus on translating complex security risks into clear, actionable outcomes for clients.

CORE COMPETENCIES

Security & Risk: OWASP Top 10, API Security Testing, Vulnerability Assessment, DevSecOps, Anomaly Detection, Cloud Security (AWS, Azure, GCP), Security Automation

Technical: Python, JavaScript, Node.js, SQL, Robot Framework, GitHub Actions, CI/CD Pipelines, scikit-learn, MongoDB

Professional: Stakeholder Communication, Technical Documentation, Agile Delivery, Cross-functional Collaboration, Problem Solving

EDUCATION

Master of Cybersecurity Mar 2026 – Dec 2027

Monash University, Melbourne | Cyber Operations, Software Security, Cryptography, Computer Architecture & Networks

Bachelor of Engineering, Information Science and Engineering 2019 – 2023

JSS Science and Technology University, India | CGPA: 8.93 / 10

PROFESSIONAL EXPERIENCE

QA Automation Engineer | EchoStar / Dish Network Technologies (Fortune 500) Aug 2023 – Jan 2026

- Applied OWASP security testing practices across APIs for Apple and Amazon B2B integrations, identifying 20+ critical defects including security vulnerabilities before production deployment
- Built an automated security defect-reporting tool (Python, Robot Framework, JIRA API) that analysed test failures and auto-generated severity-rated tickets, reducing manual review effort by 70%
- Designed and implemented CI/CD pipelines with embedded security controls, automating 300+ test cases and improving deployment reliability and security coverage
- Eliminated 60+ hours of recurring manual testing effort through scalable automation frameworks across multiple product integrations
- Led migration from ReadyAPI to Robot Framework, improving framework maintainability and execution efficiency across the QA team
- Awarded Spot Award (Sep 2024) for automating critical path test flows for Apple and OFSLL integrations; received three further manager shoutouts for upholding company values and automating critical workflows

PROJECTS

SecAudit, Automated Security Vulnerability Scanner | Python, GitHub Actions, GitHub API

- Detects OWASP-mapped vulnerabilities (missing security headers, HTTPS enforcement, insecure cookies) in live web applications via automated CI/CD triggered scans
- Integrates GitHub API to auto-create severity-rated Issues per finding, mirroring the JIRA defect reporting pattern used professionally at EchoStar

AI Log Anomaly Detector | Python, scikit-learn, Pandas

- Built a hybrid rule-based and ML system (Isolation Forest) to detect brute force attacks, endpoint scanning, and off-hours access in server logs
- Achieved zero false positives and zero false negatives on a 531-entry test dataset with three distinct injected attack patterns across three redesign iterations

Automated Security Defect Reporting Tool | Python, Robot Framework, JIRA API

- End-to-end automation tool that analysed test results, identified failures, and auto-generated JIRA tickets; identified 13+ critical issues during automated execution
- Reduced manual defect reporting effort significantly, improving team turnaround time and defect tracking accuracy

Stack Truck, Logistics Coordination Platform | Node.js, MongoDB, JavaScript, HTML/CSS | **1st Place, 24-Hour Hackathon**

- Built a full-stack platform enabling real-time coordination between truck drivers and clients, streamlining logistics communication and task management
- Designed and delivered end-to-end under 24-hour hackathon conditions; won 1st place at Sahaj Software Hackathon (May 2022)

ACHIEVEMENTS & RECOGNITION

- Spot Award, EchoStar / Dish Network Technologies (Sep 2024) — awarded for automating critical OFSLL workflows, improving efficiency and deployment reliability
- Onshore Manager Recognition, EchoStar / Dish Network Technologies — recognised for ownership, timely delivery, and handling critical production situations
- 1st Place, 24-Hour Hackathon, Sahaj Software — won for developing the Stack Truck logistics coordination platform under time-pressured conditions

CERTIFICATIONS

- OWASP Top 10 for Large Language Model (LLM) Applications
- Cloud Security and Audit Fundamentals — AWS, Azure, GCP
- PractiTest Certified User (2024)
- Cryptography and Network Security
- EchoStar AI Aware Graduate | IBM / EchoStar AI Academy (8 courses completed)
